

By Malek Hachache

The future of humanity

VENEZ PASSER DE SUPERBES VACANCES DANS NOTRE GÎTE

The near future

Today's world is at war for a share
Wealth and land as in the Middle Ages
The economic and military superpowers
Masters of science where technology
thrives Are threatened with decline by
past civilizations But the learned
spirit in the face of outdated
religions New prophets in geniuses of
science Generate the power of these
powers. The human brain with great
thoughts Delivery of artificial
intelligence Satellites in orbit and
space studies Scanning the universe in
the beauty of the sky At electronic
speed in front of science, Civic
education For his soul and
conscience. The United Nations will be
the eye of the storm For order, in the
face of racism, fundamentalism and its
clones By working tirelessly by the
force of the superpowers She will
distribute the tasks and means in her
soul and conscience

So that JUSTICE reigns supreme
She will constantly build the world
to universal laws May hope flood
with life for a perpetual paradise
To be carried out on earth instead
of believers' dreams

And his hellish threats for all
disbelievers. The UN and UNESCO are
developing as a tool Acute
multiculturalism with a taste of honey
so that the sun in every human will
finally shine without difference of the
bright colors of the rainbow Technology
with precise and assisted robots Will
not destroy the welfare of humanity But
will be used more to treat without
discrimination To put an end to all the
causes of invasions Basic necessities a
right With habitat and care without
crescent or cross On the set of the
four cardinal points Where the UN will
raise its flag to the highest When in
all countries respect for the laws will
reign, With a Cartesian spirit and with
self-respect, Run by the good and the
best of us, Then no human will be
brought to their knees again.

Future dream or reality

I dream, I dream endlessly of a future world Where the hope of an earthly paradise Palpable floods us From his music to conductors That dispel the clouds Of all human miseries Instead of a dream in pictures, Where heaven from beyond the grave leads Weak humans in life To be harakiri With a bomb they explode So that everything alike may rest Shredded into murdered Victim of the Illuminated That social injustice hurts By the looting of wealth What do autocracy preach To the finances of full pockets Among the poor Where mediocrity remains queen

Large groups must Fight
miseries and sorrows
For the poor to drink
The same pure and
healthy water then with
a Cartesian mind He
produces from his land
Fruit without pain. To
feed his own Of love
and not of hate Flowing
through his veins With
hopes lagging behind
And misery for queen
Where resistance is
futile

This is the role of Man
And superpowers in respect
of rights By force of law
To dress naked humans Of
the divine genius of
science Who unties the
mind and the hands Re
fugees of the Faith To
each his own His language
and his identity With
respect for his beliefs In
dictated democracy That
freedom sponsors Of sacred
thought Without any
dementia In this age of
enlightenment Great powers

Where the learned mind Must
work miracles With
clairvoyance Because
positive employment
Knowledge and science is a
very happy morality For all
consciousnesses It's justice
and fairness The throne of
all strength It's time to
exterminate Genocidal
thoughts From Nazism to
Islamism From fundamentalism
to racism By the school that
will provide The geniuses of
tomorrow To build a world
Human well-being Tsunamis,
hurricanes will disappear
And the earthquakes of the
catastrophes of yesteryear,

As well as all the erupting
volcanoes For the light in the minds
of the nations. All the powers will
stop fighting each other
And prevent nuclear weapons from
proliferating In the relentless
battle of all sources of misery Our
honest, human leaders will be worthy
and proud The West and the other
super powers They will thus avoid
their decadence. And destroy the
reign of ignorance These sermons of
ideologies and religion Which give
way to the genius of science If and
only if everything is soul and
conscience. The oppressed peoples
will be delivered without detours
From the yoke of mediocrity with no
way back Women and especially
children with protected rights
The future will be at the school of
the new nations Where justice and
common sense reign over humanity
With passion of love and without
hatred or betrayal With absolute
respect for human rights

In all places and in all circumstances
The forces of the superpowers in the
hands From the UN with the right to
interference The future of humanity
past and present From the time of
rituals to that of reason Evolves at
the relative speed of time To improve
life without conquering nations. Food
self-sufficiency in degraded countries
From the third world who moans in
excruciating pain Is a sure insurance
for all comfort of life On earth, no
hatred, no rage, no tears, no contempt
The big rich and powerful countries No
longer need slaves or peasants But
intellectuals with a learned mind
Without any suicide in the believers'
paradise The right of the living to
public health With the DNA genotype
within everyone's reach Keeping pace
with technological change Without
cancer, neither AIDS, neither
diabetes, nor madmen,

Neither endemic diseases
Or those prone to
pollution And global
warming that threaten the
nations Even less
communicable ailments
Occult weapons of the
scientific world Whose
ravages are terrible
Horrible and evil.

The perpetual development
of infrastructures Rail,
road, maritime, space and
air; Where to move, easy,
inexpensive and without
walls Will chase hatred
from the eyes of the
torrential rains Souls and
hearts of all the needy

So on earth our fellows will no longer have to suffer From no right to life nor from the coffin to paradise Because the UN will be there by its force to guarantee it to them This sacred right to free and voluntary movement People and goods all over the earth And in free, neutral and war-free zones Imposed in the nations all sisters and brothers If not ! isolation of non-rights states Will be the first sanction of all leaders But if they persist, without faith or respect for the law then world justice will be done with a learned spirit. The first objective of civilized nations Will therefore be to achieve terrestrial well-being And not to perpetuate a destiny of disaster victims

The sacred duty to be
performed on earth With all
human intelligence
By wisdom endowed with an iron
fist This is pure
righteousness sane and queen
This divine thought which of
good use Laborious works of
our hands Through the
centuries of our age Is the
guarantor of the best tomorrow
The mission of each species Is
subordinate to intelligence
Which is constantly developing
Through knowledge and science
Where technology without
mysteries Makes well-being
prosper Because poverty,
misery And every social
scourge of our era

With greed of the rich on
earth Are the only
sources of wars Cursed by
the witnesses of the
universe Between the too
sweet and the too bitter
During the time when
machines speak, So let's
lead to a better future
Where artificial
intelligence softens our
sorrows Instead of a
world where tomorrow is
still scary

The creation of world
authority With the right of
scrutiny, of interference
Exploitation of space forces
Of an army of robots So
that order is established Of
sandstone or of strength
Without brutalization that
degrades. Deprivation, the
only pain This worst
penalties Without passion of
hate In all nations Space
and time in the day Where
robots with iron hands In
velvet gloves that humanized
justice manages Will bring
all the help Necessary and
sufficient To protect the
life of love Facing the
threatening damned.

living The future of humanity
And the rights of all creatures
Of a very learned mind
Cartesian but pure Without
human errors Precise medicine.
Jobs without penalties With
sufficient contributions For a
healthy life To adapted
pleasures So the rich queens
Rewarded efforts Can live
beloved Of their deserved
fruits Without being disturbed
Nor ever deprived. Like video
conferences, Robots intervene
remotely, A universal currency
that protects By the general
force of respect for the
laws The people, inflicted By
dishonest leaders, without
faith Incompetent in many
nations Who still have not found
help

Africa, America, ASIA,
and the Orient Third
world culture of the fire
of hatred An
international bank card
to the citizens of the
world, The world authority
called the UN Assisted by
NGOs and UNESCO And
organizations armed with
robots(protected but who
have no right to attack
to deathall living
natures) Managed by
international courts
That lead the united
nations to universal laws

That the human sciences inspire
with a Cartesian mind In all
areas for the well-being of
humans Through the ages for a
better tomorrow The mission of
each species Is subordinate to
intelligence Which is constantly
developing Through knowledge and
science Where technology without
mysteries Makes well-being
prosper Because poverty, misery
And every social scourge of our
era With greed of the rich on
earth Are the only sources of
wars Cursed by the witnesses of
the universe between the too
sweet and the too bitter During
the time when machines speak,
Artificial intelligences assist
us So let's lead to a better
future Instead of a world that
generates our misfortunes. Thanks
to the new absolute weapons The
world will be at peace and
happier Because the superpowers
to avoid decadence

The strong human being of
tomorrow Won't need the believers
dream But artificial intelligence
in his hands For the best in
space and time Financial powers
with the friendly weapon
By satellites to humanized minds
Distribute the tasks to the poor
nations And destroy the caches of
all autocracy A world where no
nation is excluded Equal gender of
race and religion To promote
endlessly and without illusions
Ways and means of producing
wealth With the only reflex, the
big fight Against hatred, misery
and mediocrity So that every day
is even better With sweet
brotherhood deep in our hearts
Healthy mind and body For all
citizens of the world Peace will
be king at the cost of our
effortsthen all our boats will be
safe

The distant future is
already taking shape
Through the evolution of
science Which let us
glimpse the beyond Of the
end of all our suffering
Thanks to genetic
manipulation, And the
strength of healthy
science The android is
invented and improved,
Provided with a human head
And the rest artificial
Then like brain studies
With the discoveries
Regenerated organs
Androids in their turn Who
no longer have ailments Nor
certain pleasures

Like overwhelmed humans
With artificial eyes, nose
and ears And the rest
regenerated or repaired
Leaving room under the blue
of the skyThe human of his
faults rid of Then the
android with the improved
brain With the discoveries
of all regenerated Will in
turn create an advanced
robot That neither pain nor
aches will disturb So this
artificial intelligence
robot This super perfected
wonder Take control of our
comfort of life A servant
capable of self-programming

This is the new human power
Who makes himself absolute
master of the land This
unalterable robot that nothing
slows down No disease, no pain,
no hellfire. The human being
from android to robot Achieve a
healthy and better life Neither
fear nor hatred nor pain nor
withers But puzzles and
happiness Facing the wind of
the stars under the heavens He
will conquer new worlds
Scrutinizing the secret
universe of god Where hope is
invented and floods us So in
other dimensions Visible in all
the immensity Discover various
creations But still difficult
to identify Like the animals
that run Were submissive and
dThe android wants to eliminate
in turn

The suffering and lost human being, He put an end to his weaknesses, Leave the genetics to the age Quantum technology To better perfect oneself. But embarrassed by the weight of his body Can't reach the speed of light So the evolved and super powerful android Who seeks knowledge in the immensity Wants to get rid of yesterday's master And its hardware Android support To blend in with the light Conquering the universe But the mass limits the speed And the trips And the energy of soul and life Still missing from the robot So the disabled android, complexed Threat of bad faith The humanized dimension Or human extermination

The very distant future

Android research Will go
further through the sciences
Develop a robot With a head
and artificial intelligence
Likely to have abilities
Humans and androids To then
create a robot To human
capacities But super
developed Capable from a
distance To scrutinize the
creations A By the mass of
his body in all the immensity
But this artificial
intelligence With his
physical and intellectual
strength Has no soul of life
So the android wants to be
master The weak man gives way
To a humanized
machine Soulless for the
conquest of the universe

Then thanks to the spatial evolution
With computer speed And the use of
robotics Perpetual discovery New
worlds in the space where the time No
longer has its place Artificial
intelligence With its material
support Will be destroyed by humans
With his spiritual strength,
So the evolved human soul High
spirituality Will then destroy the
invented robots And this thanks to
the immortal soulits integrated and
eternal energy The human will have
for travel support Of his living body
In space and time Neither the matter
of robots Nor that of androids
But his nature at all regenerated
With a pure or an unclean soul He
will then go victorious over the
robots Conquering new worlds Carried
by a beam of light Its self-
regenerating body Designed as an
engine assembl Merging matter and
anti matter Where its zero immaterial
mass

Drill mystery black holes
By the shine of the beam of his
light Accelerated faster than
lightning He will go and scan the
whole universe Communicating
Telepathically In his genius
teleportation Guided by quantum
computer in tune with cybernetics
Will allow the universe to be
scrutinized At the speed of light
While on earth Where the old human
no longer exists Will be the
dignified and proud human Under
the vault of the heavens Then his
spiritual and physical life Super
evolved with cosmic dimension This
human who self-regenerates
Teleports and telepaths And feeds
on almost nothing Without worrying
about tomorrow shining eyes in
clear sight very fine hearing ears
Spirits with sincere thoughts With
sudden music And a healthy soul Go
to the conquest of the infinites
Under the reign of oblivion Where
the secrets remain And our
thoughts go astray

He scans the universe where
he pierces The secrets of
black holes, With its
combined shell, Of materials
and anti materials, That
neither time Neither space
alter With a neutral and
learned mind The human then
will glimpse In the universe
of other creations Where the
deeper meaning vanishes From
morning to evening and time
And for the pleasures of
travel Which carry it into
nothingness He will perceive
new horizons To the sublime
images where time stands
still He discovers the
universe

Without the shadow of the
clouds, And its secrets
today which were no longer
yesterday, locked in the
night, Of the infinitely
large, Or the infinitely
small. In always this
unknown: Where the life of
good will have then,
Variable levels of ecstasy
And that of evil, Sorrows in
unalterable images Where
matter and antimatter remain
In duality, and the
pleasures and the
pains Regulated, according to
the merits of mortals, With
Einstein's genius in
relativity.

When, suddenly, respecting
LAVOISIER (nothing is created,
nothing is lost, everything is
transformed) Then comes the
paroxysm of science The last
cycle of human evolution Where
the good and the bad In
equilibrium are stamped
So a truth spreads out across the
world Neither human robots, nor
human robots But just super
powerful humans With perpetual
self-regeneration Who go about in
the immense universe In immortals
in search of the eternal GOD the
creator will break his
silence Where will the common
people find the answer? . . .
